

Information and instructions for patients.

EUS procedure afternoon (pm) instructions

Endoscopic Ultrasound

One week before your EUS

- Your procedure is expected to be a DAY CASE ONLY. You will need to arrange for an adult friend or relative to take you home and stay with you overnight.
- Please STOP TAKING iron tablets or any medications to stop diarrhoea, if you take them.

IMPORTANT– if you:

- have DIABETES and take medications or insulin
- take WARFARIN, ASPRIN OR ANY BLOOD THINNING medications

and have **not** been given a medication plan by our Liaison Nurse, please contact us as soon as possible on 9231 2272 to discuss what to do with your medications.

Fasting instructions the day of your procedure

- **You may eat and drink normally up until 7am.**
 - Take your usual medications before this time at 6am – except those you have been told not to take prior to the procedure.
- **After 7am** – You can drink water only. No solid food or milk should be consumed after this time.
- **After 11am** – NOTHING AT ALL to eat or drink including gum, lollies and cigarettes.

Where to come on the day of your procedure

- **At your admission time, come to the Day Procedures reception**
1st Floor Main Hospital Building A. Main entry via 55 Victoria Parade, Fitzroy.
 - Wear comfortable clothes and flat shoes.
 - Do not wear jewellery, nail polish or acrylic nails and do not bring any valuable items.

When you go home:

- Remember you have had a light anaesthetic.
- **An adult must pick you up and take you home and stay with you overnight.**
- We will contact them with a pick up time when you have had your procedure. Bring their phone number with you.
- You are not allowed to drive, operate machinery, sign legal documents or drink alcohol for the rest of the day.
- A copy of your procedure report will be given to you to take to your referring doctor.
- The hospital will contact you if you need another procedure or follow up appointment.

More information about Endoscopic Ultrasound (EUS)

Before your procedure, you will be given sedation by injection into a vein to make you more comfortable. The procedure will take between 15 and 45 minutes

An EUS scope has an ultrasound transducer built into the tip.

It provides both endoscopic and ultrasound pictures.

Image: <http://dc.eidohealthcare.com>

Ultrasound enables examination of tissue beyond the GI mucosal surface.

It is used to assess the pancreas, stomach, oesophagus and biliary system.

By passing a needle through the endoscope, samples are gathered

Safety and risks

An EUS is usually a simple and safe procedure. However there are some possible complications which you should be aware of. These may include:

- Bleeding – usually only if biopsies are taken or polyps removed.
- Reaction to the sedative or anaesthetic used
- Complications from heart or lung disease
- Perforation – a tear in the gastrointestinal tract lining

It is possible if these serious complications occur that you may require surgery or blood transfusion.

There may be mild, temporary discomfort following your procedure. If you develop severe abdominal pain, fevers or chills, vomiting, passing of black stools or feel very unwell you should contact the hospital on 03 9231 2211 and ask to be transferred to the Emergency Department

If you have any questions:

You can call the Endoscopy Waiting List Team on (03) 9231 2272
